

# Table

## Management

### *The Software Veloce, Your manager*

Veloce Table Management gives you at a glance a complete overview of your dining room.

The table plan lets you manage:

#### **1. Lineups**

- You can see instantly which tables have received their bill, as they are identified with a \$ sign, as well as the duration of the customers' stay, in time increments; this gives you a pretty accurate idea of the time when the table will become available.

#### **2. Service**

- The table plan can also tell you instantly, for all tables, how service is proceeding, whether there is a specific problem at a table, whether service is getting slow...

#### **3. Customer assignment**

- Highly appreciated by buffet operators, this function lets the hostess assign the customers to a table and enter the number of children and adults as she takes the group to the table.

#### **4. Order checking**

- As the manager, you do not always know which server has which table, or the number of the table. However, if you know where the table is located in your dining room, you can check the order for accuracy, apply a discount or make a cancellation.

#### **5. Reservations**

- See Reservations information sheet.

**Available from \$499.00**
